HOME

Home · new action items

- Payment and plantation work shows up as action items, like boundary walks today.
- Teal = payment tasks, green = plantation tasks, blue = scheduled checks.
- Each item opens straight into its screen for that farmer.

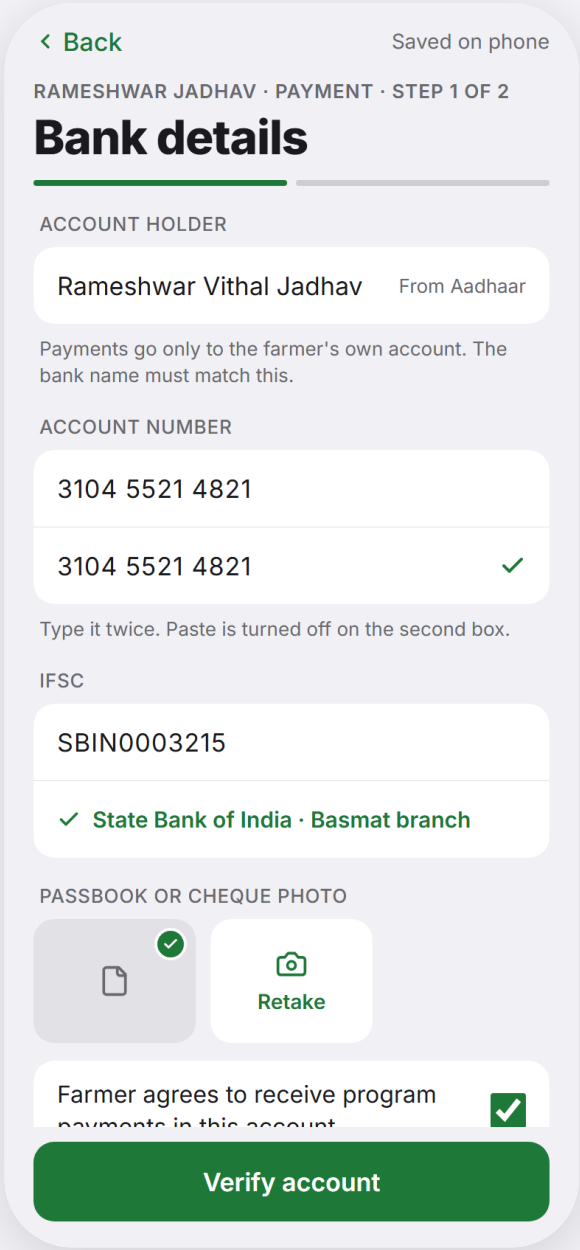

P1

PAYMENT · STEP 1 OF 2

Bank details

- Account holder name is filled from the Aadhaar and can't be edited.
- Account number typed twice with paste off; IFSC looks up bank and branch.
- Passbook or cheque photo (camera only) and the farmer's consent to receive payments.

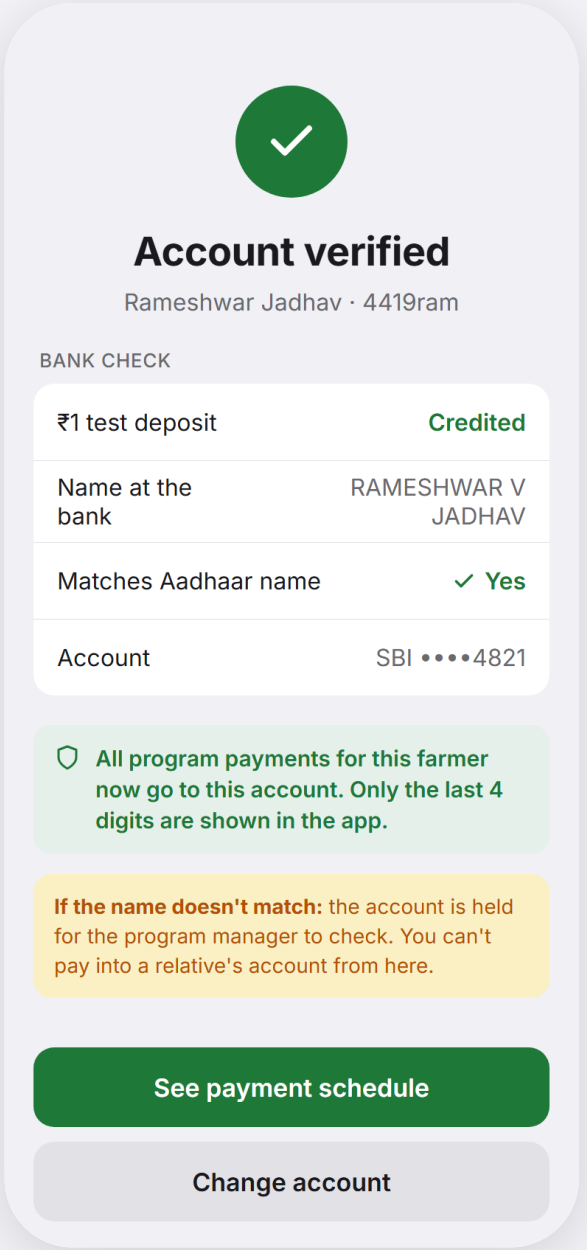

P2

PAYMENT · STEP 2 OF 2

Account verified

- A ₹1 test deposit confirms the account exists and returns the name the bank holds.
- That name must match the Aadhaar; a mismatch holds the account for the program manager.
- Only the last 4 digits of the account are ever shown in the app.

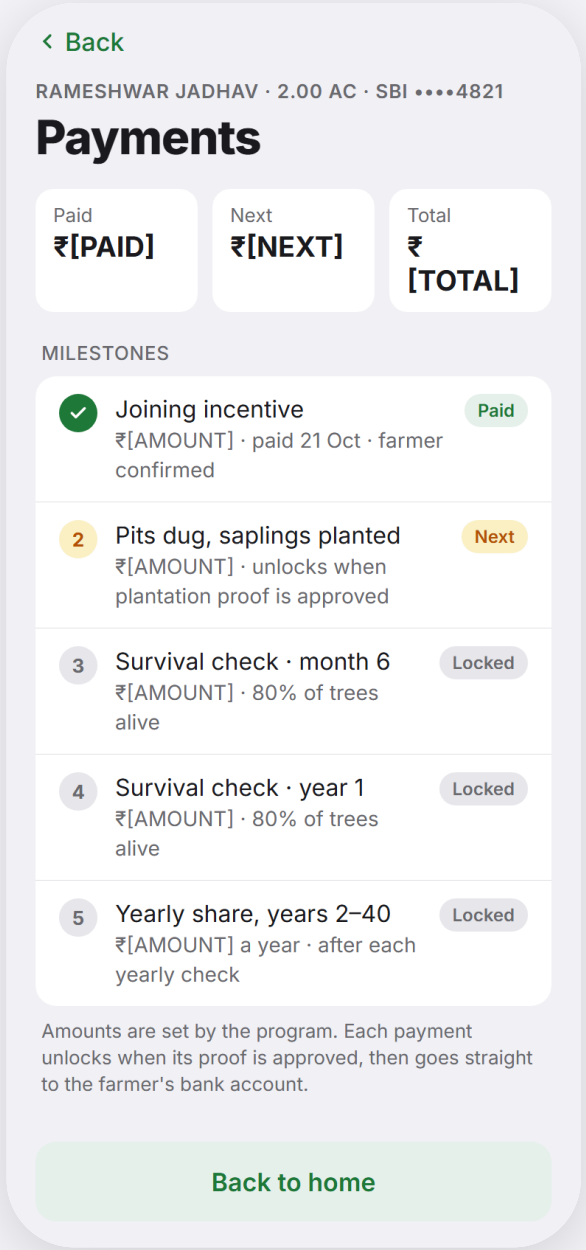

P3

PAYMENT

Payment schedule

- Paid, next and total amounts for the farmer at a glance.
- Milestones: joining → planting → survival month 6 → year 1 → yearly share.
- Each payment unlocks only when its proof is approved, then goes to the verified account.

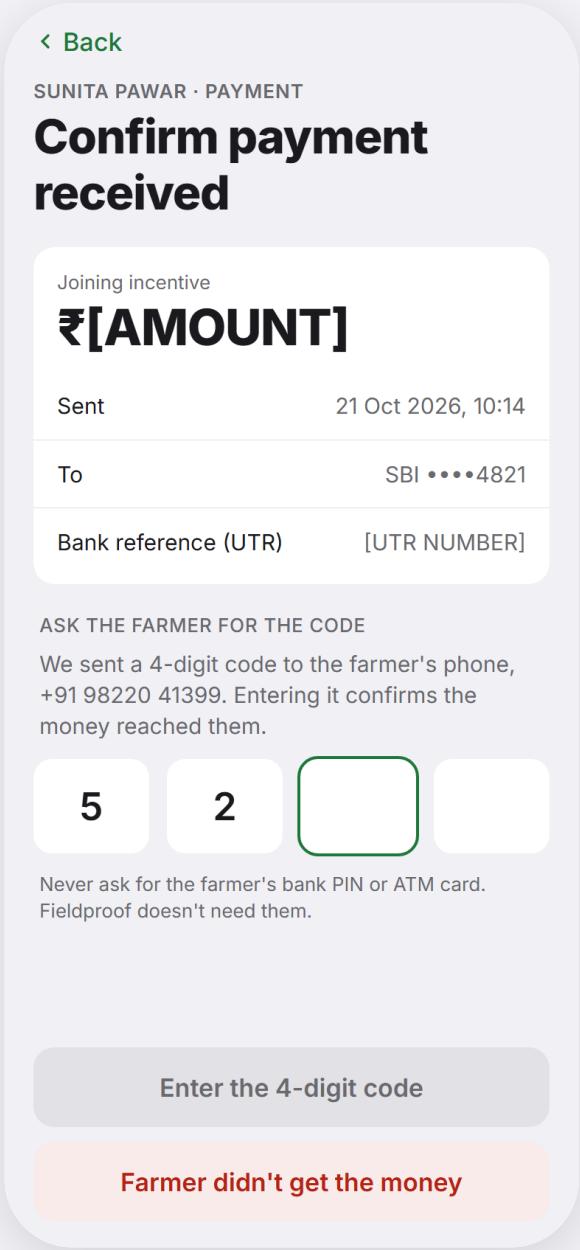

P4

PAYMENT

Confirm payment received

- Shows the amount, date, account and bank reference (UTR) of the transfer.
- The farmer reads out a 4-digit code sent to their own phone to confirm receipt.
- "Farmer didn't get the money" raises a case. The app never asks for bank PIN or card.

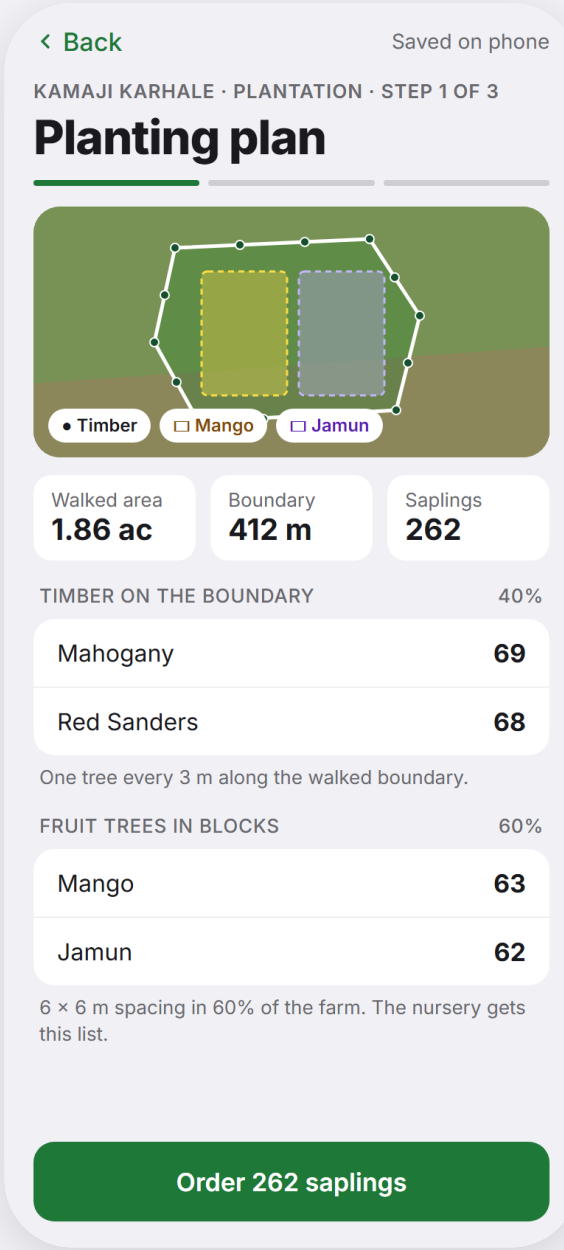

T1

PLANTATION · STEP 1 OF 3

Planting plan

- Sapling counts are worked out from the walked boundary and the farmer's tree choices.
- Timber: one tree every 3 m of boundary. Fruit: 6 × 6 m spacing in the fruit blocks.
- Example: 1.86 ac, 412 m boundary → 137 timber + 125 fruit = 262 saplings for the nursery.

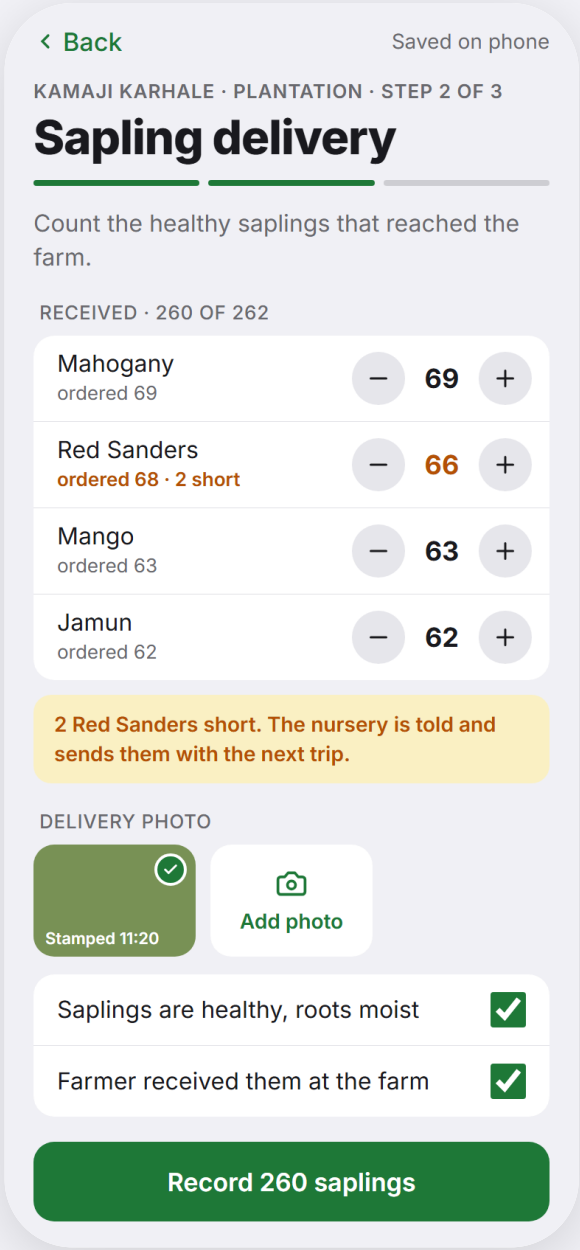

T2

PLANTATION · STEP 2 OF 3

Sapling delivery

- Count received per species against the order; shortages are flagged to the nursery.
- Stamped delivery photo (location and time), camera only.
- Checks: saplings healthy, and the farmer received them at the farm.

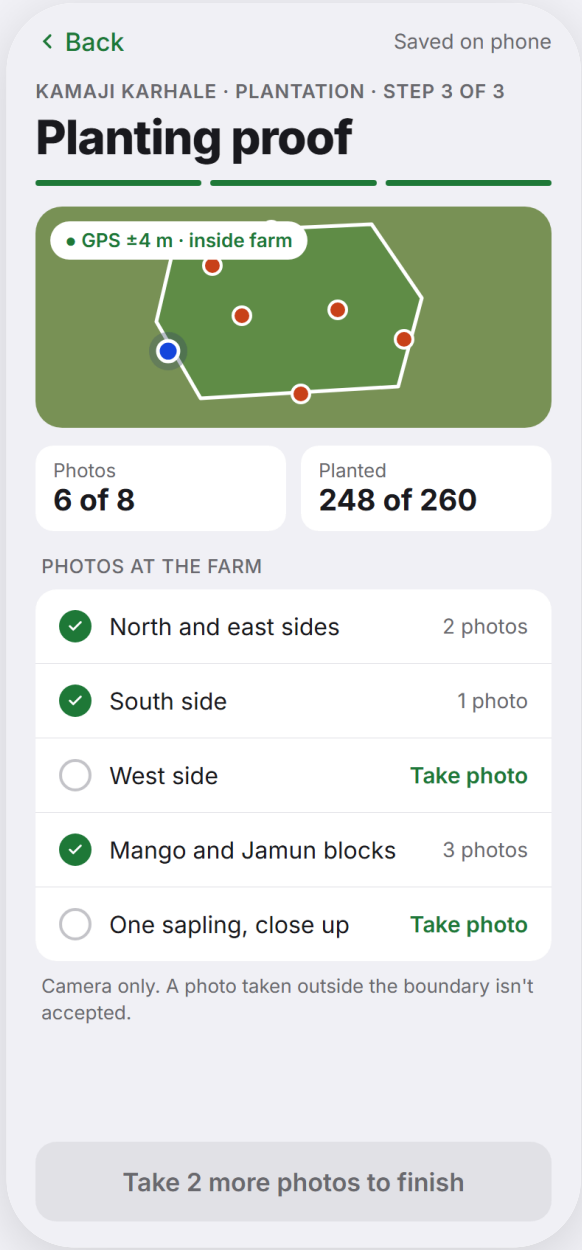

T3

PLANTATION · STEP 3 OF 3

Planting proof

- Required photos for each side of the farm and each fruit block, plus a close-up.
- Every photo is geotagged and refused if taken outside the walked boundary.
- Records planted vs delivered; finish unlocks when all required photos are in.

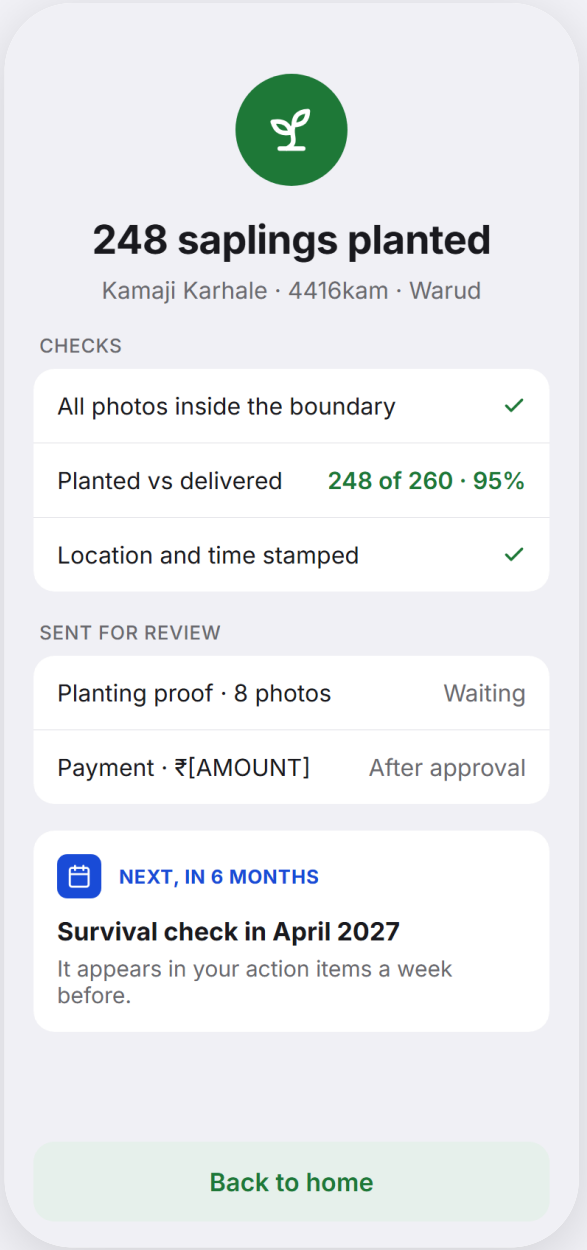

T4

PLANTATION

Plantation recorded

- Automatic checks: photos inside boundary, planted vs delivered, stamps present.
- Planting proof and the linked payment go to the program manager for review.
- The 6-month survival check is added to the surveyor's action items automatically.

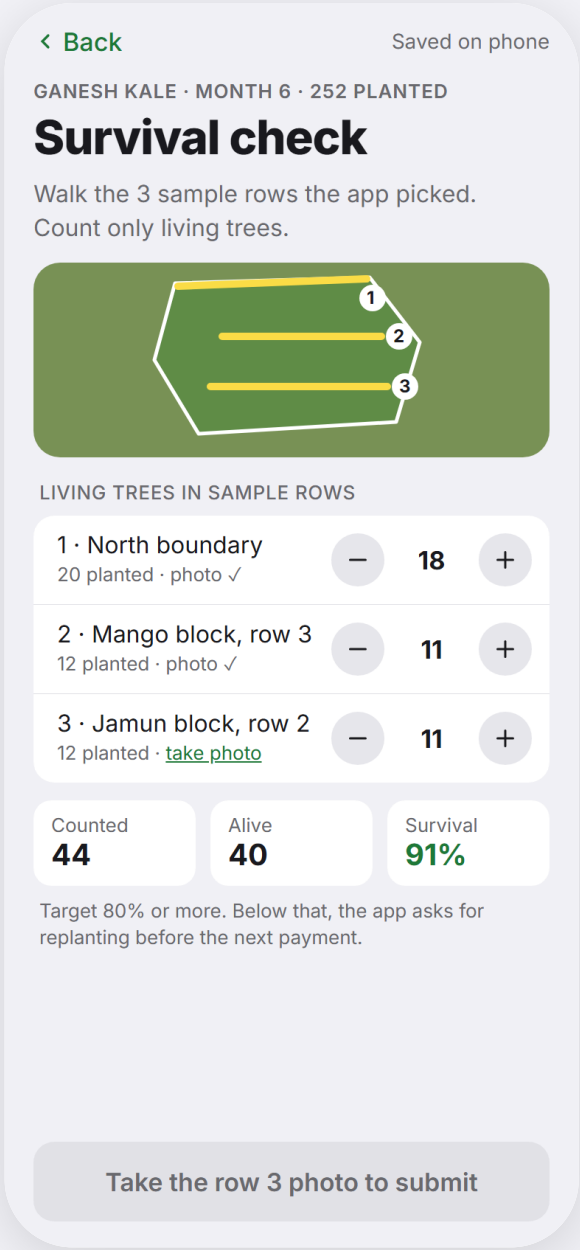

T5

PLANTATION · MONTH 6, YEAR 1, THEN YEARLY

Survival check

- The app picks sample rows; the surveyor counts living trees and photographs each row.
- Survival = alive ÷ counted. Target 80% or more.
- Below 80%, replanting is asked for before the next payment unlocks.

FOR THE PROGRAM MANAGER

Decisions to confirm

Amounts	All rupee amounts are placeholders (₹[AMOUNT]); the program sets them.
Spacing	Timber 3 m apart on the boundary; fruit trees 6 × 6 m in blocks.
Survival target	80% alive at month 6, year 1 and each yearly check.
Payment method	Direct bank transfer to the farmer's own account, verified by a ₹1 test deposit. UPI or a partner such as an FPO would change P1–P2.
Approvals	The program manager approves each proof before the linked payment is released.
Saplings	A nursery prepares and delivers saplings from the planting plan.
